Research Interests

I'm broadly interested in machine learning and deep learning. My goal is to develop robust machine learning to reliably interact with a dynamic and uncertain world. This goal has many layers – from how to quantify uncertainty and improve robustness in decision-making procedures, to how the algorithm converges and generalizes to the unseen data.

Publications

Meta Adversarial Perturbations | [Paper](#)

AAAI Workshop'22

Chia-Hung Yuan, Pin-Yu Chen, Chia-Mu Yu

Vancouver, Canada

- Proposed a meta adversarial perturbation (MAP), a better initialization that causes data to be misclassified with high probability after being updated through only a one-step gradient ascent update.
- MAP achieves 10-20% improvement, compared with naïve fast gradient signed method.

Neural Tangent Generalization Attacks | [Paper](#) | [Video](#) | [Code](#) | [Competitions](#)

ICML'21

Chia-Hung Yuan, Shan-Hung Wu

Virtual

- Devised neural tangent generalization attack (NTGA), the first efficient work enabling clean-label, black-box generalization attacks against deep neural networks, making trained networks fail to generalize to unknown data.
- NTGA decreases the generalization ability sharply, i.e. 99% -> 15%, 92% -> 33%, 99% -> 72% on MNIST, CIFAR10 and 2-class ImageNet, respectively.

Adversarial Robustness via Runtime Masking and Cleansing | [Paper](#) | [Video](#) | [Code](#)

ICML'20

Yi-Hsuan Wu, **Chia-Hung Yuan**, Shan-Hung Wu

Virtual

- Devised runtime masking and cleansing (RMC), a new defense method, to improve adversarial robustness.
- RMC achieves robustness ~98% on MNIST, ~85% on CIFAR-10, ~60% on ImageNet, respectively.
